

Title: mvn docker:stop not called after integration test

Post Body:

pom.xml:

```
<project xmlns='http://maven.apache.org/POM/4.0.0' xmlns:xsi='http://www.w3.org/2001/XMLSchema-instance'    xsi:schemaLocation=
```

After running `mvn integration-test`, I found the docker containers still running by `docker ps`. I have to run `mvn docker:stop` to stop and remove them manually. But `mvn verify` can stop and remove docker containers automatically. Why? Anyone can help? Thanks
