

Title: Docker Compose NoClassDefFoundError while trying to run container. Not recognizing JSON Dependency

Post Body:

Can someone please help me I'm trying to make a container from my java app. I'm using maven and it runs perfectly locally. But when I'm trying to run it as a container, i get this error. I already have the JSON dependency in my pom.xml but it's still not working.

This is the Error log:

Attaching to vs-lager vs-lager | Exception in thread "main" java.lang.NoClassDefFoundError: org/json/JSONException vs-lager

dockerfile:

FROM maven:3.6.3-jdk-8 AS BUILD #Kopiere alle Dateien COPY pom.xml /tmp/ COPY src /tmp/src/ WORKDIR /tmp/ #Build .jar file RUN mvn package

I already have this dependency instead of my pom.xml file pom.xml:

<dependency> <groupId>org.json</groupId> <artifactId>json</artifactId> <version>20210307</version></dependency>
