

Title: Bitbucket Pipelines - mvn clean install not working with JavaFX

Post Body:

I am using Bitbucket Pipelines for building a project from our university.

Here is my configuration from bitbucket-pipelines.yml:

```
image: maven:3.3.9-jdk-8  pipelines:  default:    - step:      script: # Modify the commands below to build your repository
```

And here is some of the compilation error -> relates to JavaFX:

```
ERROR] COMPILATION ERROR :  [INFO] ----- [ERROR] /opt/atlassian/pipeline
```

And here some output of the build failure:

```
INFO] BUILD FAILURE [INFO] ----- [INFO] Total time: 12.
```

If i build it locally on my Mac it works fine, but if i try with Bitbucket Pipelines i only get those errors. I have already tried with the default maven:3.3.3 image.

How is it possible to build JavaFX in Bitbucket Pipelines?

Accepted Answer:

This worked for me:

```
image: maven:3-jdk-8  pipelines:  default:    - step:      script: # Modify the commands below to build your repository.
```
