

Title: Cannot create docker access object

Post Body:

I would like have spring integration test with the plugin of fabric8, but when I try to run the test I got the next error:

Cannot create docker access object

I have ubuntu and I think that I have well configured dockers, I haven't had any problems with dockerfiles or dockercompose, so may it will be either a permissions problems or I forgot something.

I past below my fabric8 configuration, this have an image of mysql and the maven-failsafe-plugin to integration test.

```
<!--maven plugin -->          <plugin>          <groupId>org.apache.maven.plugins</groupId>          <artifactId>maven-fa
```

A bit late but try to restart Docker. I had the same issue and restarting docker resolved the Problem.

Docker Desktop on Windows 10
