

Title: Spring Boot Maven plugin - spring-boot:run and graceful shutdown

Post Body:

I can run a Spring Boot application with a following Maven command:

```
mvn spring-boot:run
```

but I don't know how to do a graceful shutdown of application which was started in a such way. Please advise.

Accepted Answer:

To gracefully exit your application simply hit `ctrl-c` in your terminal.

Or you can use `mvn spring-boot:start` to start you app in background and `mvn spring-boot:stop` to shutdown gracefully.
