

Title: Circular view path exception with Spring framework

Post Body:

Basically, access '/' and '/a' are working on browser. Access '/testme' is not working. Error is

```
2016-03-13 15:04:37.709 ERROR 1933 --- [io-8080-exec-57] o.s.boot.context.web.ErrorPageFilter : Forwarding to error page from request [/testmenull]
due to exception [Circular view path [testme.html]: would dispatch back to the current handler URL [/XXXX/testme.html] again. Check your ViewResolver
setup! (Hint: This may be the result of an unspecified view, due to default view name generation.)]
```

I do a string grep, but cannot found 'ViewResolver'. I have no idea why '/' and '/a' work. Any idea?

All xml files:

pom.xml

```
<project xmlns='http://maven.apache.org/POM/4.0.0' xmlns:xsi='http://www.w3.org/2001/XMLSchema-instance'    xsi:schemaLocation=
```

web.xml

```
<!DOCTYPE web-app PUBLIC    "-//Sun Microsystems, Inc.//DTD Web Application 2.3//EN"    "http://java.sun.com/dtd/web-app_2_3.dtd"
```

Accepted Answer: None

Highest Rated Answer:

the value of @RequestMapping is "testme" and the value of return is also "testme" so that when you access "/testme", the web will redirect to "/testme" again. This will lead to endless redirection to "/testme".
