

Title: Spring Boot Maven Plugin not creating executable jar

Post Body:

My POM is as below. But the executable JAR is not being create when I run 'mvn clean package'. However, when I remove the dependencyManagement element and add spring boot as parent POM, everything works.

What am I missing?

```
<?xml version='1.0' encoding='UTF-8'?> <project xmlns='http://maven.apache.org/POM/4.0.0' xmlns:xsi='http://www.w3.org/2001/XMLSchema-instance'>
```

Accepted Answer: None

Highest Rated Answer:

You need to configure spring-boot-maven-plugin by yourself:

```
<build>
  <plugins>
    <plugin>
      <groupId>org.springframework.boot</groupId>
      <artifactId>spring-boot-maven-plugin</artifactId>
```

Obviously set your own plugin version. Now if you run mvn install or mvn package you'll have executable JAR generated.
