

Title: Non-resolvable parent POM: Could not transfer artifact org.springframework.boot

Post Body:

I am creating simple spring boot web application I am using the project generated by spring Initializer

I have set my JDK and maven in the path Also done setting for JAVA\_HOME

While running the application getting following error

Non-resolvable parent POM: Could not transfer artifact org.springframework.boot:spring-boot-starter-parent:pom:1.5.3.RELEASE from/to central (<http://repo.maven.apache.org/maven2>): This is usually a temporary error during hostname resolution and means that the local server did not receive a response from an authoritative server (repo.maven.apache.org) and 'parent.relativePath' points at no local POM @ line 14, column 10 -> [Help 2]

following is my POM in the project

```
<?xml version='1.0' encoding='UTF-8'?> <project xmlns='http://maven.apache.org/POM/4.0.0' xmlns:xsi='http://www.w3.org/2001/XMLSchema-instance'>
```

Accepted Answer: None

Highest Rated Answer:

try to update maven dependencies by hands `mvn dependency:purge-local-repository`.
