

Title: Compilation Failure : cannot access LoggingEventAware [ERROR] class file for org.slf4j.spi.LoggingEventAware not found on mvn clean install -U

Post Body:

I have upgraded the spring boot version from 2.3.5 to 2.7.5 , resolved most of the dependency versions. But when i do the maven clean install , i received the compilation failure error : cannot access LoggingEventAware [ERROR] class file for org.slf4j.spi.LoggingEventAware not found

But i do not see any error in the java file - LoggingConfiguration.java.

When i just do reload of project to resolve all the dependencies - it gives error for maven plugin : Cannot resolve plugin  
org.apache.maven.plugins:maven-release-plugin:3.1.1

I am not sure what is the issue. I have tried to restart IntelliJ after invalidate cache and also cleared the .m2 repository .Nothing helps. Please suggest your inputs how to resolve the same.

Here is the sample pom.xml

```
<project xmlns="http://maven.apache.org/POM/4.0.0"                xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"                xsi:schemaLocation="http://maven.apache.org/POM/4.0.0 http://maven.apache.org/xsd/maven-4.0.0.xsd">
```

Accepted Answer: None

Highest Rated Answer:

Upgrade to `slf4j-api:2.0.4` or later to address this issues. Something in your dependency tree is likely pulling an older version.
