

Title: org.postgresql.util.PSQLException: FATAL: role 'amigoscode' does not exist

Post Body:

I am a newbie to SpringBoot. I am trying to create a spring boot application which i am running using docker. when i run this app, i get the following error

```
org.postgresql.util.PSQLException: FATAL: role "amigoscode" does not exist
```

I don't have any hint, as i am not able to trace this error. Role "amigoscode" already exists. I am attaching below the application.yml and docker-compose.yml

application.yml

```
server:
  port: 8080
spring:
  application:
    name: customer
  datasource:
    password: password
    url: jdbc:postgresql:
```

docker-compose.yml

```
services:
  postgres:
    container_name: postgres
    image: postgres
    environment:
      POSTGRES_USER: amigoscode
```

Can you please guide me, what i might be doing wrong here? I have referred other similar question here, but none of them solves my issue. Thank you.

Accepted Answer: None

Highest Rated Answer:

Additional to hints above, make sure that **Postgres is not running on the local machine out of Docker** because it might conflict with the Postgres instance in Docker
