

Title: FileNotFoundException while dockerized java spring boot application start

Post Body:

The json file I use in my project cannot be found, what could be the reason?

[enter image description here](#)

countriespringbootproject-countries-springboot-1 | java.io.FileNotFoundException: src/main/resources/countries.json (No such

this is my dockerfile

```
FROM mysql FROM openjdk:latest WORKDIR /app ADD src/main/resources/countries.json /app/countries.json COPY target/*.jar ap
```

this is my docker-compose.yml

```
version: '3' services:  mysql_db:    image: mysql    environment:      MYSQL_DATABASE: 'countries'      MYSQL_USER: 'hum
```

My LoadJson.java class

```
package com.hum.countriesrestapi.Utils; import java.io.File; import java.io.IOException; import java.util.ArrayList; impo
```

I'm making a request. I want to load the data in json into my mysql database and use them in my spring boot project. It was working fine in local but after dockerizing my mysql and java spring boot project I started to have this problem. How can I fix?

Both Docker and my database work in my project, but my JSON format file cannot be found. How can I fix?
