

Title: Mount volume not working in docker

Post Body:

I am new to docker.I am using **Windows 10** and installed docker for my machine and working docker via power-shell.

My problem was i can't copy my files from docker-compose.yml file

My file look like below

```
version: '2' services:      maven:      image: maven:3.3.3-jdk-8      volumes:      - ~/.m2:/root/.m2      - /d/projects/test/:/cod
```

This test project i'm using maven and i have lot of files on it. But it's give the error, like

ERROR: for maven Cannot start service maven: oci runtime error: exec: '/code/wait-for-it.sh': stat /code/wait-for-it.sh: no such file or directory ERROR: Encountered errors while bringing up the project.

I shared my local drive also in docker settings, still mount problem was there.

Please help me, thanks for advance.
