

Title: Spring Boot in Docker throwing an exception 'hibernate.dialect' not set

Post Body:

I am using spring boot to develop an app and I am using mysql as database.I have the below configuration in application.properties.

```
server.port=8090 spring.datasource.url=jdbc:mysql://mysql:3306/sampleDB spring.datasource.username=root spring.datasource.password=
```

I have the respective DB in my local and it is working in my local. But as soon as I create a docker image and link to my mysql docker container it is throwing the below exception.

```
org.hibernate.HibernateException: Access to DialectResolutionInfo cannot be null when 'hibernate.dialect' not set
```

The container is not even building even for me to look into it.

```
sudo docker run --name bootApp -d --link mysql:mysql springio/employeesecurity
```

where **springio/employeesecurity** is my springBoot docker name and **mysql** is my msq container.

Accepted Answer: None

Highest Rated Answer:

Probably your error is caused by not being able to connect to the db (deeper in your stack)

Have you tried not specifying the port in your connection string:

```
spring.datasource.url=jdbc:mysql://mysql:3306/sampleDB
```
