Title: maven build failing to download com.lowagie:itext:jar:2.1.7.js6 dependency

Post Body:

Previously my build is running fine but all of a sudden it's failing with the below error.

```
Failed to collect dependencies at ar.com.fdvs:DynamicJasper:jar:5.3.0 -> net.sf.jasperreports:jasperreports:jar:6.8.0 -> com.l
```

These are the dependencies I am using in my code.

```
        <dependency>            <groupId>com.lowagie</groupId>          <artifactId>itext</artifactId>           <versio
```

I tried changing the DynamicJasper version also but no luck.

In the docker file, I am using the below image as a base image.

```
FROM maven:3.6.0-jdk-11-slim AS build
```

Accepted Answer:

```
<dependency>    <groupId>com.lowagie</groupId>    <artifactId>itext</artifactId>    <version>4.2.0</version> </dependency>
```

My issue resolved after adding this dependency.

Highest Rated Answer:

if you run maven on linux .then use this

```
<dependency>        <groupId>net.sf.jasperreports</groupId>        <artifactId>jasperreports</artifactId>        <version>6.12.1</versi
```
