Title: How to remove unwanted projects from STS Boot Dashboard
Post Body:

I'm using Eclipse STS 3.8.1

Is there anyway to remove apps from the Boot Dashboard?

Reason for asking (Similar to my real world application/s):
I have multiple Spring Boot applications, some of which use a shared library. In this library I have some common configuration: Eg: Setup RestTemplate/s with Ribbon (@LoadBalancer)...

On order to have access to the @Configuration and @Bean annotations I include the below dependancy into my libraries pom:

```
<dependency> <groupId>org.springframework.boot</groupId> <artifactId>spring-boot-starter</artifactId> <version>1.4.0.RELEASE</
```

The problem is now my library is displayed in the Boot Dashboard with my applications even though it is not a Boot Application.

This is rather annoying as it clutters the dashboard, how can I remove this?

Just to expand on my above example:
I'm using a multi-module maven project with multiple applications and libs under the same parent.

Accepted Answer:

Go to the Preferences -> Spring -> Boot and configure the projects to be excluded from the boot dashboard by default. Just put the name of the project in that text field.
