Title: HeidiSQL won't list my database

Post Body:

My postgres `yaml` part looking like this:

```
postgres:    container_name: 'postgres'    image: postgres:10.1    environment:        - POSTGRES_USER=postgres        - POST
```

Then when I am logging in with that credentials using HeidiSQL I cant see my database:

Any ideas?

Update thanks to this answer I managed to find my database https://dba.stackexchange.com/a/1304 using this select:

```
SELECT datname FROM pg_database WHERE datistemplate = false;
```

Now the question why HeidiSQL won't show that?

Accepted Answer:

We have to specify the database name in the connection manager, only then will it display the selected database. Please refer to the images below...

There is no provision to view all the databases in PostgreSQL in HeidiSQL, but for MySQL the database name field is optional.

Also make sure you don't have the star icon selected. Otherwise it will only show the tables marked as favorites
