Title: docker-compose-maven-plugin Failed to execute goal up
Post Body:

I use the following plugin:

```
<plugin>                    <groupId>com.dkanejs.maven.plugins</groupId>                    <artifactId>docker-compose-maven-pl
```

docker-compose

```
version: '3'  services:    webapp:      container_name: test_db     build: src/     depends_on:       - psql    psql:
```

Dockerfile_tk:

```
FROM tomcat:9-jre8-alpine  ENV PATH_TOMCAT_USERS /usr/local/tomcat/conf/ ENV PATH_MANAGER /usr/local/tomcat/webapps/manager/ A
```

Dockerfile_db:

```
FROM postgres:latest  ENV POSTGRES_USER andrej ENV POSTGRES_PASSWORD password ENV POSTGRES_DB test_db
```

But I receive: `Failed to execute goal up`

When I run only Dockerfile_tk or Dockerfile_db separetly, docker works successfuly. Problem in docker-compose.

When I run it from terminal, using 'docker-compose up' it returns: Building psql ERROR: Cannot locate specified Dockerfile: Dockerfile

What am I doing wrong?
