Title: How to configure spring boot web app with redis using Docker
Post Body:

I have a small spring boot web application which saves the data to redis.

After running docker-compose.yml containers are started but on `localhost:8085` i have 'The connection was reset'.

spring boot aplication.yml

```
server:     address: 127.0.0.1 --- spring:     profiles: development server:     address: 127.0.0.1 --- spring:     profiles:
```

docker-compose.yml

```
web:    build: docker_app    ports:     - '8085:8080'    links:    - redis  redis:       image: redis
```

How do I link spring boot and redis?

What did I miss?

Accepted Answer:

`127.0.0.1` is the wrong address. Use `redis` as the hostname.
