Title: How come my Test fails in Docker Maven container 3.5.4-jdk8 when it passes using maven on command line

Post Body:

I have the following test which passes in IDE, and when run as Junit and even from the command line using `mvn clean verify`.

```
@FixMethodOrder(MethodSorters.NAME_ASCENDING) @RunWith(SpringRunner.class) @WebFluxTest(controllers = AddNewEntryController.cl
```

```
}
```

However when I push the code to Gitlab.com and the CI takes over and uses the maven docker container 3.5.4-jdk8 it fails with the following error.

```
Field error in object 'timeKeepingEntry' on field 'startTime': rejected `value [09:00; codes typeMismatch.timeKeepingEntry.st
```
