Title: Cannot (apt-get) install packages inside docker

Post Body:

I installed ubuntu 14.04 virtual machine and run docker(1.11.2). I try to build sample image ([here](#)).

docker file :

```
FROM java:8   # Install maven RUN apt-get update   RUN apt-get install -y maven ....
```

I get following error:

```
Step 3: RUN apt-get update  --> Using cache  --->64345sdd332 Step 4: RUN apt-get install -y maven  ---> Running in a6c1d5d54b7
```

following solutions I have tried, but no success.

> restarted docker [here](#)

> run as `apt-get -qq -y install curl` [here](#) :same error :(

how can i view detailed error message ? a any way to fix the issue?

Accepted Answer: None

Highest Rated Answer:

you may need to update os inside docker before

try to run `apt-get update` first, then `apt-get install xxx`
