Title: Unable to access jarfile when running Docker image

Post Body:

I am novice to Spring Boot Microservices and Docker.

The dockerfile in microservice project:

docker build:

docker images:

when running the image, there is an error: Unable to access jarfile register_server.jar

Cheers, Sean

Accepted Answer: None

Highest Rated Answer:

You need to specify either the absolute target path or set the `WORKDIR`

Dockerfile Reference - Add

https://docs.docker.com/engine/reference/builder/#add

The `<dest>` is an absolute path, or a path relative to `WORKDIR`, into which the source will be copied inside the destination container. For example:

```
ADD test relativeDir/          # adds "test" to `WORKDIR`/relativeDir/ ADD test /absoluteDir/          # adds "test" to /absolu
```
