Title: Error: Could not find or load main class org.openjdk.jmh.runner.ForkedMain

Post Body:

I am benchmarking some methods using jmh through a spring boot application. When i run it through IDE it gives me benchmarks but when i package it with maven and run it through CMD it gives the below stack trace.

```
# Run progress: 0.00% complete, ETA 00:11:00 # Fork: 1 of 1 Error: Could not find or load main class org.openjdk.jmh.runner.Fo
```

I have tried setting classpath explicitly through info from bunch of forums but that didn't help running the application through cmd. Any help would be appreciated.

Thanks!

Accepted Answer:

Had same `ClassNotFoundException` with *Gradle* + JMH which was an [incompatibility bug](#) fixed in recent versions ([jmh-gradle-plugin >= 0.5.0](#)). As blase as this advice is: try upgrading (or downgrading) and seeing if it still occurs.
