Title: Springboot-docker error: cannot invoke 'DockerCliInspectResponse.hostConfig()' because 'inspectResponse' is null
Post Body:

I tried to remake a SpringBoot project from scratch, and i met this error `spring.jpa.open-in-view is enabled by default. Therefore, database queries may be performed during view rendering. Explicitly configure spring.jpa.open-in-view to disable this warning` and nothing that i found online worked. I tried to reinstall docker and now all of my projects wont start. i always get this error in my terminal:

`Cannot invoke "org.springframework.boot.docker.compose.core.DockerCliInspectResponse.hostConfig()" because "inspectResponse" i`

Does anyone have a solution?

Accepted Answer:

Today I encountered the same problem: [issue](#) on this topic has already been created on GitHub. This is caused by updating Docker Compose to version 2.23.0; Spring boot does not yet work with this version.

You need to either downgrade docker compose to 2.20.3 or wait for Spring Boot update, I think this will be fixed in next version

Highest Rated Answer:

I'm trying to downgrade docker-compose to 2.20.3 on Mac m1 but I can't, I've tried several ways:

`brew install docker-compose@2.20.4`

reinstall docker, but it installs in the latest version which is 2.23.0
